H. O'Brien et al. U.S.S.N. 09/662,846 Page 2

M

- 8. (amended) A method as claimed in claim 1 wherein all or part of HLA-G and/or all or part of one or more variants thereof is expressed as a polypeptide *in vitro* and/or in a prokaryotic and/or eukaroytic cell.
- 10. (amended) A method as claimed in claim 1 wherein the activity of HLA-G and/or any combination of variants thereof and/or blood mononuclear cells and/or a subset of such cells, selected from T cells and/or natural killer cells, is measured by one or more of the following procedures.
- (a) measuring the interaction of HLA-G and/or variants thereof with blood mononuclear cells and/or subsets thereof by assessing one or more of the following with respect to HLA-G expressing cells and/or blood mononuclear cells; cell proliferation, transformation, cytotoxic response, surface marker expression, cytokine production, conjugate formation and target specificity,
- (b) measuring the size and/or level of all or part of HLA-G mRNA and/or its encoded polypeptide,
- (c) measuring the peptide binding capability of all or part opf HLA-G and/or variants thereof,
- (d) measuring the binding capability of all or part of the HLA-G and/or variants thereof to a HLA-G receptor,
- (e) measuring one nor more molecules whose level is altered as a result of the interaction of the HLA-G and/or variants thereof and/or cells expressing HLA-G with blood mononuclear cells,
- (f) measuring the expression levels of one or more genes and/or proteins in the HLA-G expressing cells.
